

H01N2-D EXTRA FLEXIBLE COPPER WELDING CABLE

Welding Cable Structure

generally conforms to, Based on CENELEC HD 22-6, DIN VDE 0282, IEC 245-6, BS 638-4

Conductor:

Extra-fine class 5 conductor for H01N2-D conforms to IEC 60228, DIN VDE 0295

Separation:

Polyester tape (25 to 30) Micron

Outer Sheath:

HOFR Sheath, black and oil resistant

*Any other Color on specific request can also be supplied

Welding Cable Technical Data

Fixed installation : -30°C to max. + 90°C

Nominal voltage : 100/100 V

Test voltage : 1000 V

Mechanical properties : Tensile strength = 10 N/mm² Min.
Elongation = 300 Min.

Min. bending radius : 4 x cable diameter

Flame propagation : Flame retardant test
as per IEC 60332-1

Welding Cable features

- Ultra high performance flexible welding lead, double insulated for longer life and added safety
- Excellent flexibility to last longer in flex applications
- RoHS Compliant
- Based on CENELEC HD 22-6 31, VDE 0282, IEC 245-6, IS 473, BS 638-4
- Outstanding toughness & durability
- High resistance to cuts, tears & abrasion
- Resistance to oil, solvents and chemicals
- Excellent ozone and weather resistant

Welding Cable Application

H01N2-D

H01N2-D Designed for the secondary (high current) connection to automatic or hand - held metal arc welding electrodes. It is suitable for flexible use under rugged conditions, on assembly lines and conveyor systems, in machine tool and automatically operated line and spot welding machines.

Standard length cable packing:

Coils 100, 200, 300 and 500 m. in wooden reels

Technical Data Table

Current Rating :

The maximum current ratings of flexible welding cables for different duty cycles are based on an ambient air temperature of 25°C and a maximum conductor temperature of 90°C. The percentage duty cycles for various processes and applications are as follows:

- Automobile Welding : up to 100%
- Semi-automatic Welding : 30% to 85%
- Manual Welding : 0% to 60%
- Very intermittent or Occasional Welding : up to 20%

Voltage Drop :

When total cable lengths in excess of 15 mtrs., are involved, it may be necessary to use cables of larger cross section to ensure that the voltage drop is not excessive and welding currents are maintained at adequate levels.

TECHNICAL INFORMATION

Cross Sectional Area	Copper Construction	Nominal Thickness	Outer Dia Appx.	Max. Conductor Resistance at 20°C	Current rating					
					Welding applications					
					Duty Cycle					
					100%	85%	80%	60%	35%	20%

- The number of wires is approximate and wire diameter is nominal; they shall be such as to satisfy the requirements of conductor resistance of IEC 60228 / DIN VDE 0295 / IS 8130 / BS 6360
- In view of continuous improvements in our design and process, specifications given here in are subject change without notice.

- > All are flexible conductor
- > Insulation material is HOFR
